LACIE D2 CD Software

Congratulations on your purchase. This instruction sheet explains some important facts that will help you install and use the software. The enclosed disk contains D2 CD software and Apple Foreign File Access.

Compatibility

D2 CD software supports HFS, ISO 9660, and High Sierra file formats and a variety of CD-ROM mechanisms. See the Read Me file on the enclosed diskette for details. This software includes the D2 CD Remote application to play audio CDs.

Installation

To install the CD-ROM software, insert the enclosed diskette and double-click the Installer icon.

CDs and Macintosh File Sharing

CD-ROM discs can be shared using Macintosh file sharing under System 7. Any CD-ROM discs that are mounted when file sharing is started will automatically be shared. However, shared CD-ROM discs can't be ejected while file sharing is on. To change a CD in this situation, stop file sharing using the Sharing Setup control panel, then eject the CD-ROM disc and insert another if needed. The new CD-ROM disc can now be shared by re-starting sharing in the Sharing Setup Control Panel.

Hearing Sound

The sounds contained in CD-ROM games, multimedia presentations, and other Macintosh files will be played over the Macintosh's built-in speaker(s) or on headphones plugged into the Macintosh's headphone jack.

When using this software with an external CD-ROM drive, the sound portion of an audio CD is NOT transmitted over the SCSI cable and into the Macintosh. You must do one of the following to hear audio CDs:

- To hear audio CD sound through headphones or powered speakers, plug the headphones or speakers into the CD-ROM drive's headphone jack.
- To hear audio CD sound through an amplifier, attach a cable between the CD-ROM drive's external audio connectors and the amplifier's input jacks.
- To hear audio CD sound on the Macintosh's built-in speaker(s) or on headphones plugged into the Macintosh's headphones jack, you need a Macintosh configuration that supports audio/visual input and playthrough. See the documentation included with your Macintosh AV for cabling and Sound control panel configuration

Playing Audio CDs

To play an audio CD, place the CD into the caddy or tray and push it into the drive. An icon will appear on the desktop. Open the D2 CD Remote application from the Apple menu and click Play.
